

## Disposal of WEEE and meaning of the wheeled bin symbol

In 2002 the European Union introduced the Directive on Waste Electrical and Electronic Equipment (WEEE). The directive requires you as end-user to dispose of any WEEE separately. Electrical and Electronic Equipment is labeled with the following 'crossed out wheeled bin' symbol.

WEEE waste may contain hazardous substances that should not end-up in the (human) environment and can have adverse effects if they do. Roxio however assures that no such substance is used in Roxio equipment.

Furthermore, WEEE is a vast source of raw materials. With the ever rising worldwide demand for new equipment and the ever decreasing volume of natural raw materials, letting this potential source go to waste is unacceptable.

If equipment is collected separately, the equipment can be recycled and up to 85 to 90% of the equipment can be re-used as new material saving the use of virgin raw materials and energy for producing these.

For these reasons Roxio is asking you, the end-user, to take any waste electrical and electronic equipment to your nearest collection facility. If you are unaware of the location of such, please contact your municipality. They will be able inform you of the disposal options at a facility in your area.

Please contact us if you have any questions on WEEE.
