ROXIO

## Extract Audio File from a DVD

**Roxio Media Manager** makes it easy to extract audio from a non-copy protected DVD, like a piano recital that you shot and recorded to DVD, or other performance. Then, you can create a CD or DVD music disc, export the audio to a portable device or save the audio file to your hard disk.

## **Getting Started:**

**1.** To start, run Roxio Creator, and then click "Music-Audio" in the Project Pane. The Music-Audio task list opens. Choose "Create Music Disc Projects" on the right. Roxio Music Disc Creator opens.

**3.** Choose your source video files. Click the drive containing the disc, and then the disc's Video\_TS folder. In the Video\_TS window on the right, click "Chapters" to view the content. You can listen to any chapter using the playback controls on the bottom of the window. Choose the desired files, pressing the Shift key to choose sequential chapters, and the Ctrl key to choose non-sequential chapters. Click "Add" to add the selected chapters to the project. The Import from CD/DVD dialog opens.

**4.** Choose a format. You can save the audio file in its original format, or convert it to your target format while importing, saving disc space and time. In this tutorial, we converted the audio files to iPod AAC good quality. If desired, click "Options" to customize your format options, or simply accept the default settings, which should work well for most users.

Import from CD/DVD		×
Import Settings:		
Keep original format	Options	
Custom Keep original format iPod AAC good quality MP3 (good quality) MP3 (low quality) Wav (Recommended) WMA (good quality) WMA (low quality)	r\My Documents\My Musi Browse	
	Audio Tags Save Cancel	

**5.** If necessary, customize your format options. In the Output Settings dialog, the parameters shown will vary by the selected format; those in the screen below are for the iPod AAC format. Customize the default values as desired and then click "OK" to close the File Format dialog.

Output Settings File Format Filename/Folder Structure	Presets: Pod AAC good quality V NOTE: If you plan to edit the audio before outputting it in its final form, we recommend that you use an uncompressed format (such as WAV).
	Format: Encoder:
	Format:         Bits per sample:           • Stereo         44.100 Hz         16         ¥
	Quality / compression
	Dest Quality Smallest Size 128000 bps Options: 44.100 kHz, 16 Bits, Stereo, 128 kbps
	Default Settings Help OK

6. Choose a storage location. Back in the Import from CD/DVD window, click the "Browse" button to navigate to a different storage location for the converted files. If desired, click the "Audio Tags" button to add metadata to the file. The Roxio Edit Audio Tags window opens.

10. If necessary, rename your tracks. Back in Music Disc Creator, you can preview your tracks by selecting them and using the playback controls on the bottom of the screen. If you didn't name your audio files in the metadata panel, you can rename them here. Select each file, click the "Rename" button and then type the desired name. Don't worry about extensions; Music Disc Creator will add those automatically
