This tutorial will demonstrate how to quickly and easily produce a customized audio CD compilation with Music Disc Creator, an Easy Media Creator 10 Task Assistant.	
1. Run Easy Media Creator 10 Suite, and click **Audio** in the Project Pane.	
2. Then click **Music Disc Creator.** Roxio Music Disc Creator opens.	3. In the Project Type pane, click **Audio CD.**	
4. Click **Add Audio Tracks** to add songs on your computer or network. Otherwise: • Click **Import from CD/DVD** to import tracks from a CD or non-copy protected concert DVD • Click **Record Audio** to record audio from scratch.	4. Add tracks by: • Clicking any individual track and then clicking **Add**. • Add contiguous tracks by clicking the first track, pressing the Shift key and clicking the last track and then clicking **Add**. • Add random tracks by pressing the Ctrl key, clicking all desired videos and then clicking **Add**.	
Click **Close** after adding all tracks.	
5. To customize the audio compilation, you can:	
a. **Click and drag** any disc break point to the desired location.	b. **Click and drag** any track to the desired location	c. In the Transition column: • Add gaps between tracks by clicking **Gap between tracks**. • Overlap the two songs by clicking **Overlap with previous track**, and type a duration in the adjacent number field.	d. Choose the desired Fade in pattern for each track.	e. Choose the desired Fade out pattern for each track.	f. You can adjust each track individually, or right click and choose **Select All** to adjust all at once.	
g. To trim any tracks, click **Edit Audio**.	In the Roxio Quick Sound Editor, click buttons on the top left to **Trim/Fade, Clean, Enhance** and/or **Equalize** your audio.	

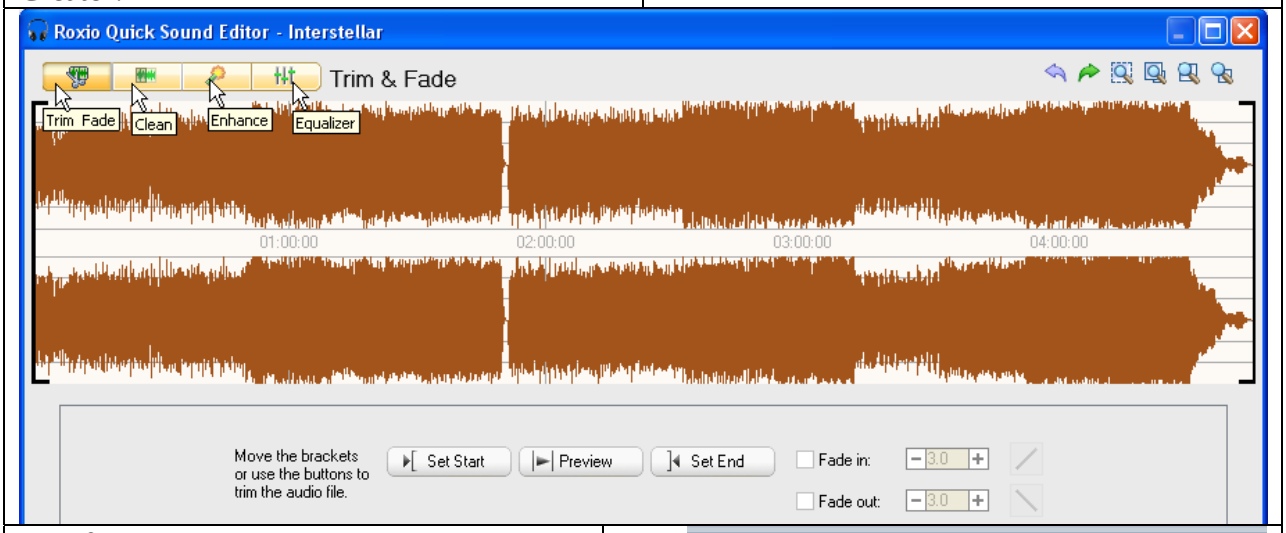
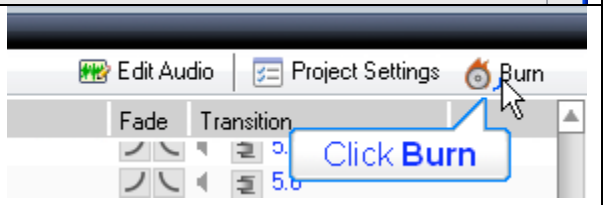
Click Done (not shown in Figure) after finishing your editing to return to Music Disc Creator.



6. After customizing the project, click **Burn** to start producing discs.


Note that you can also Save the project for later editing, by choosing **File > Save Project** from the Music Disc Creator menu.
