roxio secure BURN™ Enterprise

Roxio Secure Burn™ Enterprise reliably burns data on CD, DVD, Blu-ray Discs™, and USB thumb and external drives with easy dragging and dropping. Powerful data encryption and password protection ensure disc contents can only be accessed by authorized users. Logging functionality tracks activity and the Permissions Manager enforces IT security policies at the user level.

Monitor, Control, Protect

Empowering employees to work anytime and anywhere is a key part of keeping your organization productive. But along with all the benefits of mobility comes increased risk. With so much data on so many CDs, DVDs and USB drives, how can your organization manage and protect valuable, confidential information?

Roxio Secure Burn Enterprise is a data burning solution tailored to support business security objectives. Powerful administrative tools help your IT department establish and enforce security protocols across the organization. FIPS 140-2 compliance allows you to meet government requirements for securing data.

Drag and drop tools make it easy for employees to burn to CDs, DVD, Blu-ray Discs and USB drives.

Secure Burn Enterprise Meets Key Business Objectives

- Protects data on removable media that could be easily lost or stolen
- Helps ensure compliance with data privacy laws and policies
- Safeguards your corporate reputation by helping to prevent data breaches
- Helps your business meet FIPS 140-2 requirements*
- Secures files with powerful 256-bit AES encryption
- Gives IT administrators the power to create enforceable security measures
- Enables logging to keep track of data, computer, user name, files, folders and other information
- Offers simple burning and encryption tools that are easy for employees to use

Secure Burn Enterprise Features and Benefits

Easy Burning to Removable Media
Whether employees are working with CDs, DVDs, Blu-ray Discs or USB drives, Secure Burn Enterprise makes burning as simple as dragging and dropping files. Users can easily burn single or multiple discs. The Edit File list offers additional options for adding and removing files, and adding new folders.

Secures Data with Powerful Encryption
Support for FIPS 140-2* certified encryption and password protection ensures your organization complies with security standards, and avoids compromising valuable company and customer information.

Ensures Employee Compliance
Secure Burn Enterprise takes the burden of compliance off employees. With encryption protocols enforced by IT, employees can burn files to removable media while automatically following company security policies.

Powerful Administrative Tools
Secure Burn Enterprise offers system administrators the tools they need to monitor and control burning and encryption:

- Force Close Disc — Control whether discs are forced closed after burning
- Force Disc Encryption — Ensure that information is always protected by forcing disc encryption every time data is burned
- Set Password Protocols — Control whether passwords are applied by default or can be entered by users
- Monitor activity — Enable logging to keep track a variety of information, including data, computer name, user name, files and folders. Data can be accessed using Windows Event Viewer or the log can also be checked using a log server solution
- Set Write Permissions — Set read/write permissions for a group or change them individually with a Registry Key value. Allows IT to set up groups in which encrypted data can be read and shared without a password for greater employee efficiency
